

Welcome to Toothbrush!

This site offers a huge amount of games, an AI helper, an anonymous group chat feature, and more (coming soon)!

Loading Games

This website contains about 2,760 games, and all of them are at your fingertips instantly! Open the Master Stash and type in a game name (without spaces). If you'd like to add the game to your sidebar under the Master Stash, simply click the red Bookmark button (it'll turn green), click a game, and then click Bookmark. You can rename the game file to anything and you can also delete games from the sidebar with the Trashcan icon.

Other Features

AI Chat: Click the button in the top right. You can type a prompt and click Enter/Send. Your chats will autosave, and the current chat you're in will appear in the sidebar only if you start another chat or leave the window and come back.

Proxy: Click the Proxy button and a new tab will appear with the proxy inside it. This goes to Helios Proxy. Shout-out to them!

Anonymous Group Chat: To use the group chat, someone needs to click 'Host Room' to start a room. Enter whatever title and six-digit PIN (letters AND numbers included) you'd like, and click Go Live. At that point, anyone externally can join with the PIN at the top of the host's screen. (The host can show and hide the PIN by clicking on it.) Everyone on any chat is permanently anonymous. They're assigned a color and a color name + number, which randomizes every time they leave and rejoin. There is also a list of people in the chat, which can be accessed with Ctrl+Shift+L. The host can use this to kick people as well. (Kicked will get a 1 minute timeout.) At the top of the screen, if it says Network Offline, you'll still be able to host rooms. It's just offline until someone creates a room or joins one! If it doesn't work, try enabling School Mode with the checkbox.

Developer's Note

As of now, I'm still adding tons of new features and bugfixes, so be prepared if something doesn't work right. You can send me any concerns and requests in the linked

[Google Form!](#) (please fill this out ;-;)
